LABOR MARKET REVIEW

Economic Growth Region 9

Statistical Data Report for November 2013, Released January 2014

Regional and State Unemployment (seasonally adjusted)

Regional and state unemployment rates were generally lower in November. Forty-five states and the District of Columbia had unemployment rate decreases from October and five states had no change, the U.S. Bureau of Labor Statistics reported. Forty-two states had unemployment rate decreases from a year earlier, seven states and the District of Columbia had increases, and one state had no change. The national jobless rate declined to 7.0 percent from October and was 0.8 percentage point lower than in November 2012.

Nevada and Rhode Island had the highest unemployment rates among the states in November, 9.0 percent each. The next highest rates were in Michigan, 8.8 percent, and Illinois, 8.7 percent. North Dakota continued to have the lowest jobless rate, 2.6 percent. In total, 18 states had jobless rates significantly lower than the U.S. figure of 7.0 percent, eight states and the District of Columbia had measurably higher rates, and 24 states had rates that were not appreciably different from that of the nation.

Women's Earnings, 1979-2012

(Excerpted from the U.S. Dept. of Labor, Bureau of Labor Statistics, The Editor's Desk — November 4, 2013)

In 2012, women who were full-time wage and salary workers had median usual weekly earnings of \$691. On average in 2012, women made about 81 percent of the median earnings of male full-time wage and salary workers (\$854). In 1979, the first year for which comparable earnings data are available, women earned 62 percent of what men earned

Women's earnings as percent of men's, median usual weekly earnings of full-time wage and salary workers, in current dollars, by age, 1979–2012 annual averages

Source: U.S. Bureau of Labor Statistics.

Among the age groupings of those 35 years and older, women had earnings that ranged from 75 percent to 78 percent of the earnings of their male counterparts. Among younger workers, the earnings differences between women and men were not as great. Among workers who were 25 to 34 years old, women earned 90 percent of what men earned; among 16- to 24-year-olds, women earned 89 percent as much as men.

Between 1979 and 2012, women's-to-men's earnings ratios rose for most age groups. For example, the ratio increased from 68 percent in 1979 to 90 percent in 2012.

When adjusted for inflation, women's earnings since 1979 have increased considerably across the major race and Hispanic ethnicity categories. Earnings growth has been largest for White woman, outpacing that of their Black and Hispanic counterparts. Asian women earned more than their White, Black, and Hispanic or Latino counterparts in 2012.
